

Orange County Housing Report: Values Going Up

October 19, 2020

The Orange County housing market will remain a Hot Seller's Market for the remainder of 2020 and into the New Year, paving the way for persistent appreciation.

Appreciation: With strong demand and an incredibly low inventory, the market will continue to lean heavily in favor of sellers, resulting in home values rising.

One of the most popular toy fads of the 1980's was the Cabbage Patch Doll. The dolls were a "must have" for Christmas. Eager parents flocked to stores only to be met with empty shelves. Tactical shoppers knew when shipments would arrive and would be the first in line to purchase as soon as the dolls were unloaded from the truck. It was common for people to offer \$100 or more in the parking lot for a Cabbage Patch Doll that was still in the shopping cart in route to the family car. They retailed for \$30. Why would someone pay over three times the original price for a doll? It was simple supply and demand. Coleco could not manufacture and ship enough dolls to match the unquenchable demand. As a result, retailers charged more for the dolls suggested MSRP and prices went up.

When there is a scarcity of something popular for sale, the price goes up. More people are desirous of a good than the number of goods available. If that sounds familiar, it is from the echoing lecture halls of Econ 101. It is basic supply and demand. When very little supply is matched with unbelievably strong demand, prices go up. That is precisely what is occurring in the housing market today.

There is a scarcity of homes for sale. Multiple offers are the norm. It is not uncommon to hear that 15 offers are generated on a home that just hit the market. When this occurs, a bidding war ensues. It is as if a mini auction occurs. The highest and best offer wins and 14 buyers must go back to the drawing board and continue their search for a home. More buyers are desirous of homes than the number of homes available. As a result, home values have been on the rise since June. That is when the Expected Market Time (the time between pounding in the FOR-SALE sign to opening escrow) first dropped below 60-day threshold, a Hot Seller's Market.

The Expected Market Time is the speed of the market. The lower the Expected Market Time, the faster the market. It takes into consideration both the current inventory of homes available to purchase and buyers demand to pull the trigger and buy a home (the last 30-days of pending sales). Today, it sits at 40 days, far below the 60-day threshold that indicates a Hot Seller's Market, a market where sellers get to call the shots and values are on the rise.

In order to arrive at 40-days, it takes a low supply and strong demand. Today's active listing inventory is at 4,173 homes, its lowest level for this time of the year since 2012. Today's demand is at 3,153, just eclipsing the 2012 mark for this time of year. The last time it was a Hot Seller's Market, less than 60-days, was back in 2012 when it reached 39 days.

It was a Slight Seller's Market, between 60 and 90 days, last year, that is when sellers still get to call more of the shots, but there are fewer multiple offers, it takes longer to sell, and values are not changing much at all. There were 54% more homes available and demand was down by 29% compared to today. When there is more supply and less demand, the rate of appreciation drops considerably.

| | Hottest Market Since 2012 | | | | | | | | | | | |

In order for the market to remain hot for the remainder of the year, the supply must continue to by limited and demand must remain elevated. The active inventory will not change much from now through Thanksgiving. Typically, it is dropping at this time of the year, but there are currently more homes coming on the market than what is normal, resulting in a steady number of homes available. In September, there were 24% additional homes placed on the market compared to last year. It appears as if that trend will continue until the week prior to Thanksgiving. Thanksgiving marks the beginning of the Holiday Market. That is when fewer homeowners enter the fray and many unsuccessful, often overpriced, sellers pull their homes off of the market for the holidays and winter season, cyclically the slowest time of the year for real estate. By the end of 2020, there will be around 3,000 homes on the market, very similar to the end to 2012. That will result in a very low level to start 2021 and may break the 2013 record low of 3,161 homes.

Current demand will remain elevated and strong from now through Thanksgiving. That is typical for this time of the year, but is quite remarkable given that its current level far surpasses recent years. Similar to the active listing inventory, demand will begin its annual drop the week prior to Thanksgiving, the start to the Holiday Market. That is when many buyers will place home shopping on hold in order to enjoy the holiday season. Buyer activity will continue to slow and reach its lowest level of the year upon ushering in 2021. By the end of 2020, demand will drop to around 2,250 pending sales, its strongest reading since 2012.

Intuitively, many will think that the drop in demand will mean that the market will slow considerably, but that is not the case. Remember, the supply, the number of available homes, will be dropping at a considerable rate as well. Based upon the projections of 3,000 active listings available at the end of the year and demand at 2,250 pending sales, the Expected Market Time would be 40 days, identical to today. For buyers still actively looking for a home to purchase at the end of December, the fast-paced feel of the current market with multiple offers and bidding wars will be no different even in the midst of celebrating all of the end of year holiday festivities.

More people are desirous of a good than the number of goods available. That adequately describes the housing market for the remainder of the year and into 2021. Buyers will be willing to stretch the price a bit in order to find success, resulting in steady appreciation for the foreseeable future.

Active Listings: The current active inventory increased by 20 homes in the past 2 weeks, almost unchanged.

The active listing inventory increased by 20 homes in the past two-weeks, almost unchanged, and now sits at 4,173. In comparing mid-October to prior years, it is the lowest levels since 2012. Typically, the active inventory is slowly dropping during this time of the year when fewer homes come on the market now that the end of the year is fast approaching. In the

888.910.2489

past 4 weeks, inventory has dropped an average of 6% in the past five years. This year it only dropped by 1%. This is due to more homes coming on the market. In September, 24% more homes were placed on the market compared to 2019.

Expect the active listing inventory to remain elevated until the week prior to Thanksgiving. It will drop from that point through ringing in the New Year. That is when fewer homes will come on the market and many unsuccessful sellers will pull their homes off the market in order to enjoy the holiday season.

Last year at this time, there were 6,412 homes on the market, 2,239 additional homes, or 54% more. There were a lot more choices for buyers last year.

Demand: Demand decreased by 3% in the past two weeks.

Demand, the number of new pending sales over the prior month, decreased from 3,254 to 3,153, shedding 101 pending sales, down 3%. This is still the highest mid-October level since 2009 when it totaled 3,197, almost identical to today. According to Freddie Mac's weekly Primary Mortgage Market Survey®, October 15th reached another record low for the 30-year fixed, 2.81%, its tenth record low this year. The current low mortgage rate environment will continue to instigate demand.

Expect demand to remain elevated until the week prior to Thanksgiving, the start to the Holiday/Winter Market. At that point, many buyers will sideline their home search efforts for a while as they enjoy the holidays. Demand will continue to drop until it records its lowest level upon celebrating the arrival to 2021. Nonetheless, demand will remain elevated compared to recent years.

Last year, demand was at 2,251, that is 902 fewer pending sales compared to today, or 29% less.

In the past two-weeks the Expected Market Time increased from 38 to 40 days, a Hot Seller's Market (less than 60 days), where sellers get to call the shots during the negotiating process and home values are on the rise. Last year the Expected Market Time was at 85 days, much slower than today.

Luxury End: The luxury market cooled slightly.

In the past two-weeks, demand for homes above \$1.25 million decreased by 5 pending sales, down 1%, and now totals 569. Luxury did not cool as swiftly as the lower ranges. The luxury home increased by 21 homes, a 1% rise, and now totals 1,617. With an increase in the supply and slight fall in demand, the overall Expected Market Time for homes priced above \$1.25 million increased from 83 to 85 days in the past couple of weeks. That is still a hot market for luxury.

Year over year, luxury demand is up by 280 pending sales, or 97%, and the active luxury listing inventory is down by 601 homes, or 27%. The Expected Market Time last year was at 230 days, exceptionally slower than today.

For homes priced between \$1.25 million and \$1.5 million, in the past two-weeks, the Expected Market Time increased from 48 to 55 days. For homes priced between \$1.5 million and \$2 million, the Expected Market Time remained unchanged at 61 days. For homes priced between \$2 million and \$4 million, the Expected Market Time increased from 100 to 109 days. For homes priced above \$4 million, the Expected Market Time decreased from 315 to 194 days. At 194 days, a seller would be looking at placing their home into escrow around **May 2021**.

| | Expected Market Time | Share of Housing Inventory | Share of Current Demand | Last Year |
|---------------------|-------------------------|-------------------------------|----------------------------|-----------|

888.910.2489

Orange County Housing Summary

- The active listing inventory increased by 20 homes in the past two-weeks, nearly unchanged, and now totals 4,173, its lowest level for mid-October since 2012. COVID-19 is not suppressing the inventory; in September there were 21% more homes that came on the market compared to last year. This trend evolved in August and continues to this day. Last year, there were 6,412 homes on the market, 2,239 additional homes, or 54% more.
- Demand, the number of pending sales over the prior month, decreased by 101 pending sales in the past twoweeks, down 3%, and now totals 3,153. COVID-19 currently has no effect on demand. Record low rates are fueling today's exceptional demand. Last year, there were 2,251 pending sales, 29% fewer than today.
- The Expected Market Time for all of Orange County increased from 38 days to 40, a Hot Seller's Market (less than 60 days). It was at 85 days last year, **much slower than today**.
- For homes priced below \$750,000, the market is a hot Seller's Market (less than 60 days) with an expected market time of 29 days. This range represents 34% of the active inventory and 47% of demand.
- For homes priced between \$750,000 and \$1 million, the expected market time is 27 days, a hot Seller's Market. This range represents 18% of the active inventory and 26% of demand.
- For homes priced between \$1 million to \$1.25 million, the expected market time is 42 days, a hot Seller's Market.
- For luxury homes priced between \$1.25 million and \$1.5 million, in the past two weeks, the Expected Market Time increased from 48 to 55 days. For homes priced between \$1.5 million and \$2 million, the Expected Market Time remained unchanged at 61 days. For luxury homes priced between \$2 million and \$4 million, the Expected Market Time increased from 100 to 109 days. For luxury homes priced above \$4 million, the Expected Market Time decreased from 315 to 194 days.
- The luxury end, all homes above \$1.25 million, accounts for 39% of the inventory and only 17% of demand.
- Distressed homes, both short sales and foreclosures combined, made up only 0.5% of all listings and 0.4% of demand. There are only 12 foreclosures and 7 short sales available to purchase today in all of Orange County, 19 total distressed homes on the active market, up 3 from two-weeks ago. Last year there were 55 total distressed homes on the market, more than today.
- There were 3,336 closed residential resales in September, 30% more than August 2019's 2,564 closed sales. September marked a 6% increase compared to August 2020. The sales to list price ratio was 98.4% for all of Orange County. Foreclosures accounted for just 0.1% of all closed sales, and short sales accounted for 0.1%. That means that 99.8% of all sales were good ol' fashioned sellers with equity.
